* Inurse	Grade 5: Hepatitis B, Human Papilloma Virus vaccines	PLUS Grade 5: Hepatitis B, Human Papilloma Virus vaccines	PLUS Grade 5: Hepatitis B, Human Papilloma Virus vaccines
db /	Grade 9: Diphtheria, Tetanus, Pertussis, Meningococcal, Human Papilloma Virus vaccines	Grade 9: Diphtheria, Tetanus, Pertussis, Meningococcal, Human Papilloma Virus vaccines	Grade 9: Diphtheria, Tetanus, Pertussis, Meningococcal, Human Papilloma Virus vaccines
What's happening	Grades 5 & 9:	Grade 4:	Grades 4 & 8:
in the classroom	Distribution and collection of consent forms Antigen education	Distribution of letters to parents and collection of immunization records	Distribution of letters to parents and collection of immunization records
Why it's important	 Immunization has often been cited as one of the greatest medical success stories in human history Immunization is not required by law in Canada. However, under Alberta's Public Health Act unimmunized persons can be ordered by the Medical Officer of Health to stay home for specified periods of time after being exposed to a vaccine-preventable illness such as Red Measles Better immunization rates mean healthier students and communities. Healthy kids learn better! 		
How we can work together	 Create a successful partnership with your School Nurse to ensure that immunization of children occurs in a safe & supportive environment Normalize the immunization process and teach students strategies to cope with anxiety Use positive language about immunization. Protect health information Provide nurse contact information and notify parents when immunizations will occur.
